This version contains the following bug fixes:

ensure that if a screen is refreshed after a database update it is done via GET instead of POST.
fixed bug in 'std.detail1.xsl' which prevented a field's 'size' attribute in the screen structure file from being used to override the default size.
fixed bug in getData_raw() when $this->sql_orderby contains a field which does not exist in either $this->sql_select or $this->fieldspec, thus causing an error.
fixed bug in 'mnu_user.class.inc' which corrupted the password when the COPY button is pressed while running mnu_user(add1).
fixed bug in 'std.encryption.class.inc' regarding multibyte characters.
fixed bug in 'include.xml.php4/5.inc' which tried to output a numeric field name as an element id. These are invalid in XML, so are ignored.
fixed bug in 'std.filedownload1.inc' to allow spaces in the file name.
fixed bug in 'std.head.xsl' which failed to append the session name to the meta refresh line.
