No problem!

```
function isThisAGoodName($tablename)
{
	//short version requires PECL extension
	//return runkit_lint ("<?php class $tablename {} ?" .  ">");

	//"long" version
	$temp_file = tempnam(sys_get_temp_dir(), 'rad');
	file_put_contents($temp_file, "<?php class $tablename {} ?>");

	$result = `php -lq $temp_file`;

	unlink($temp_file);
	return 0 === strpos($result, "No syntax errors detected");
}
```
