After write enabling the error log and adding the prefix rad_ before the database name i got this message.

Fatal Error: MySQL error: 1044 : Access denied for user: 'augustin@localhost' to database 'rad_audit' (# 256).
Error in line 47 of file '/home/httpd/vhosts/augustin.it/httpdocs/radicore/includes/d ml.mysql.class.inc'.
Script: /radicore/menu/logon.php
Remote Address: 84.87.84.59
Request URI: /radicore/menu/logon.php

I probably need to find the ip adress from th mysqldatabase because its probably not hosted on the same server as the webserver?

Erik
