I tried to duplicate your point #1, but I could not. I went into the 'List Message of the Day' screen which, by default, is set to display 'current' records only (where start_date<=today and end_date>=today), then I pressed 'New' to create a new message with today's date as both the start and end dates. When I returned to the 'List' screen it showed up as I expected.

As for your point #2, I can add role_id as an optional field on the mnu_motd table so that a message can be specific to a particular role or available to all roles.
