Simple. All you have to do is put code similar to the following in the _cm_post_geData() method:

```
    foreach ($rows as $rownum => $rowdata) {
        if ($rowdata['id'] == 'whatever') {
            $rows[$rownum]['selected'] = true;
        } // if
    } // foreach
```

It would be a waste of time removing the select box from the screen as there would be no way to mark the row as selected.
