Subject: Message Display with SUBMIT+stay

I'm using add an ADD2 transaction which is called from a LIST2 transaction. I have implemented a message to confirm to the user what has happened after an insert causes an update to another record.

When I add a record and click the SUBMIT button I am returned to the LIST screen and my message displays correctly.

However, if I add a record and click SUBMIT+stay I get multiple messages displayed:

custom message
record inserted OK (sys message)
custom message
custom message

At first I thought I may have been inserting the message multiple times by mistake, but using the debugger confirms that I only add the message to the message array once.
