A text field will not be displayed as a multi-line text box unless you tell the framework to do so. Take a look at http://www.tonymarston.net/php-mysql/menuguide/dict_column(u pd).html for the field called CONTROL and the option of "Multi-Line Text Box". You must also specify the number of ROWS and COLUMNS that you want displayed. Don't forget that after changing the entry in the data dictionary you must export the details to your PHP script before the changes will take effect.

I hope this helps.
