You did not state which version of Radicore you are using.

I have just run this on my test system using the latest version (1.52.0) and I cannot duplicate the errors you receive. I did find an error which I recently introduced into 'std.table.class.inc' regarding the database update in the UPDATE2 task, but the fixed version is attached.

When I press the UPDATE button I am taken to the 'tst_x_tree_node(popup2)' screen, as expected. If you are being bounced out of this screen then you need to step through with your debugger to see where it is happening.

As for your problem with the DELETE, the instructions at http://www.tonymarston.net/php-mysql/radicore-tutorial4.html #relationships.step2 show that the _cm_deleteSelection() method in 'x_tree_node_jnr.class.inc' should be modified, and it is this class which should be used in the 'x_tree_node(del3).php' script.
