Your 2nd screen structure definition is wrong. You can define a row in either of the following formats:

```
$structure['main']['fields'][5] = array('list1'=>'list1');
```

or:

```
$structure['main']['fields'][5][0] = array('label'=>'list1');
```

```
$structure['main']['fields'][5][1] = array('field'=>'list1');
```

Notice that in the 2nd option the label and the field **MUST** appear in the same row otherwise they cannot be associated with each other.

Another point to note is that both the `replaceScreenColumns()` and `replaceScreenHeadings()` functions were designed to work in a horizontal (list) display, not a vertical (detail) display.
