Subject: Multiple Checkbox Control

Hi,

I'm trying to use a multiple checkbox control and I cannot find documentation on what to expect when using the control.

I have it rendering but I cannot update/insert records with the control. The framework says nothing is selected. When I look at the rowdata in _cm_pre_updateRecord() I see that it is an array.

```
[version_format] => Array
    (
        [PDF] => PDF
        [CSV] => 0
        [XLS] => 0
        [HTML] => 0
    )
```

Is there some standard function that converts this array into a string for the DB layer and back. Or do I have to implement this is my code. If so, what function callbacks would you recommend I override?

Cheers,

Kyle Brost
