Hi Tony,

I have another 'jump' related question.

I would like to have users log into the system and then be immediately sent to an "add1/upd1" screen. When the hit submit or cancel, I want them to get the normal menu screen that they would see.

I have tried to modify the start task to be my 'add1' task and the system returns to that screen every time you press cancel/submit. Which makes sense because it's at the top of the stack.

I have tried to modify the 'menu.php' to automatically call scriptNext('myadd1'), but I get the same effect.

I have tried to modify the 'menu.php' with the "append2ScriptSequence(...)" but it does not appear to do anything.

Is there any way to do it with the existing structure? If not, is there any suggestion where/how I should start coding my 'hack'?

Thanks,

Kyle Brost
