This version adds the ability to specify favourite tasks, the 'run at end' and 'run at cancel' options, and a few bug fixes.

fixed bug in unFormatNumber() where it processed an empty field.
fixed bug in getWhere() where it returned multiple selections when the current task only displayed one.
fixed bug in 'append2ScriptSequence()' which caused the 'prepend' option to fail if the $_SESSION['script_sequence'] array did not currently exist.
created some extra popups for 'Choose Task'. You will need to run the following script:

radicore\menu\sql\menu.menu_export(2010-07-18).sql in order to update the contents of your MENU database.

updated the MNU_TASK table in the MENU database to include columns for 'task_id_run_at_end' and 'task_id_run_at_cancel'. You will need to run the following script:

radicore\menu\sql\mysql\alter_table(2010-07-18).sql in order to update the structure of your MENU database.

added the MNU_FAVOURITE table to the MENU database. This stores a user's favourite tasks which are displayed as buttons on the Menu/Home Page screen. You will need to run the following scripts:

radicore\menu\sql\mysql\alter_table(2010-07-20).sql in order to update the structure of your MENU database.
radicore\menu\sql\menu.menu_export(2010-07-20).sql in order to update the contents of your MENU database.

added navigation buttons to the 'List To-Do' screens to set the selection criteria to either COMPLETE or INCOMLETE. You will need to run the following script:

radicore\menu\sql\menu.menu_export(2010-07-24).sql in order to update the contents of your MENU database.

added task 'Delete Logon Errors' to AUDIT subsystem. You will need to run the following script:

radicore\audit\sql\audit.menu_export(2010-07-31).sql in order to update the contents of your MENU database.
