Hi,

Is not deployed on Windows, but on Ubuntu (Debian Linux). Thus, I assume it has to be (dot)htaccess.

Now, is working, I did a change in the config.inc (dbprefix to be null):

ORIGINAL

```
_____________________________________________
} else {
    // this is for my shared web host
    $GLOBALS['dbusername'] = 'dan';
    $GLOBALS['dbuserpass'] = 'password';
    $GLOBALS['dbprefix']   = '****';
_____________________________________________
```

ORIGINAL

```
_____________________________________________
} else {
    // this is for my shared web host
    $GLOBALS['dbusername'] = 'dan';
    $GLOBALS['dbuserpass'] = 'password';
    $GLOBALS['dbprefix']   = null;
_____________________________________________
```
