Ok, when the file *.class.inc is created there is a line like this:

$this->dbname = 'DB1';

If I don't want to use the database DB1 anymore, instead, I want to use DB2, take in care that DB1 and DB2 have the same database schema (you can asume that DB1 is for the data of company1 and DB2 is for the data of company2, and I'm not interested to get consolidated data)

My questions are:

- Do I have to change all the *.class.inc files for to use DB2 instead of DB1?
- If I have to change all those files, is there a way to do it automatically?

Thanks for your time.
