Subject: Changing screen names

This is going to seem quite trivial in the overall scheme of things but as I said before, I am new to this and basically starting at the beginning and working my way though things.

I would like to change the heading on my screens. I have seen how to do it in Tutorial 2 but it doesnt seem to work.

I have been to Menu System : Task (Proc) and changed the description of the proc. When I run the task I still get the script ID showing up.

I also wanted to change the button text so I changed that in the same place in the field "button text". That didnt work either.

I then went to Navigation Button 1 for the calling task (a list 1 item) and changed it there. That worked fine.

Am I changing the description in the wrong place and what is the function of the "button text" field text.

Thanks and regards

Graham Jones
