I've managed to change the pgsql class to convert the arguments in the DATE\_SUB() function into the correct types, as follows:

```
WHERE DATE_SUB(due_date::timestamp, visibility * '1 day'::interval) <= '2011-12-14'
```

I've also had to change the where2indexedArray() function in the library to accept ':' in column names.

The two changed files are in the attached update. See if this fixes your problem.
