Radicore v1.72.0
Apache Version 2.2.21
PHP Version 5.3.8
MySQL Version 5.5.16

1. Use updateSelection with multiple SET like this:

```
function _cm_post_updateRecord ($rowdata, $old_data)
{
  $a = 1;
  $b = 2;
  $where = "'{$rowdata['lft']}'<lft AND rgt<'{$rowdata['rgt']}'";
  $replace = "lvl='lvl+{$a}', lft='lft+{$b}', rgt='rgt+{$b}'";
  this->updateSelection($where, $replace);
  return $rowdata;
} // _cm_post_updateRecord
```

2. Doing the above will result in:

Fatal Error: Cannot extract token from: ', lft='lft+2', rgt='rgt+2'' (# 256).

3. Had to rewrite into something like below in order to avoid this fatal error:

```
function _cm_post_updateRecord ($rowdata, $old_data)
{
  $a = 1;
  $b = 2;
  $where = "'{$rowdata['lft']}'<lft AND rgt<'{$rowdata['rgt']}'";
  $replace = "lvl='lvl+{$a}'";
  this->updateSelection($where, $replace);
  $replace = "lft='lft+{$b}'";
  this->updateSelection($where, $replace);
  $replace = "rgt='rgt+{$b}'";
  this->updateSelection($where, $replace);
  return $rowdata;
} // _cm_post_updateRecord
```
