I have the same problem with version 1.74, using debug I can see at line 96

```
if (count($_SESSION) <= 1) {
    // if $_SESSION is empty then $_POST must be empty as well
    $_POST = array();
} // if
```

The $_SESSION array is empty and the $_POST array has 4 elements
user_id: mgr
user_password: password
submit: LOGIN
session_name: menu0

At this time the $_POST array is cleaned and the login data is lost, when comment line 98 the framework works!!
