Firstly, you should start this as a new thread, not a reply to an existing thread.

Your include_path is *WAY* too big. Read the instructions in paragraph 3 of http://www.radicore.org/installation.php (which are duplicated in the REDME.TXT file in the download) and you will see that only 4 entries are needed.

The reason that the task_id is appearing as the screen title is because you have yet to place an entry for that task_id in your language_text.inc file as documented in http://www.tonymarston.net/php-mysql/radicore-tutorial2.html #step5

I have just tried the rename function on my PC and it works like a charm, so you must have an in correct setting somewhere. Can you step through the code with a debugger to see where it is constructing that file name?
