Subject: Passing URLs from _cm_formatData

I have tried following the example shown in the FAQ on how to create an HTML link within each row in a list.
The code I currently have is as follows:

```
function _cm_formatData ($rowdata, &$css_array)
 // perform custom formatting before values are shown to the user.
    {
    if (!isset($rowdata['person_name'])) {
        // merge rank first_name and last_name into person_name
        if (isset($rowdata['firstname']) AND isset($rowdata['lastname'])) {
           $rowdata['person_name'] = $rowdata['rank'] . " " . $rowdata['firstname'] . ' ' .
$rowdata['lastname'];
  $rowdata['hyperlnk'] .= 'http://www.bdnw.org.uk]';
        } // if
    } // if

    return $rowdata;
    } // _cm_formatData
```

The name concatenation works fine, but the url simply appears as [url=www.bdnw.org.uk]in th eoutput screen - not a clickable thing in sight!
Grrrrr.
