Did you follow all the instructions in FAQ133 items 4 and 5?

In particular you must have the field's control type set to 'hyperlink' in the $fieldspec array.

There are also two ways to display the hyperlink:
1) As a complete hyperlink, with the field's value containing the hyperlink as in 'http://www.example.com'.
2) As a label, with the fiield's value containing 'label [url=http://www.example.com]'
