Some of the errors thrown up by the new validator do not show up as errors at by the old validator, so I consider the new validator to be buggy. I have given up correcting errors that don't exist.

For example, http://validator.w3.org/check?uri=http://www.tonymarston.net /php-mysql/data-dictionary.html shows as valid whereas http://validator.w3.org/nu/?doc=http://www.tonymarston.net/p hp-mysql/data-dictionary.html does not. Which is right?
