You won't see the red asterisk in the update screen as the field is non-editable.

The $fieldspec['table_id_jnr'] array contains the entry 'noedit' => 'y', which makes the field non-editable by default, but the 'Add Relationship' task should cause the following code to be executed in the dict_relationship_jnr class:

```
function _cm_changeConfig ($where, $fieldarray)
{
    // make these fields editable
    unset($this->fieldspec['database_id_jnr']['noedit']);
    unset($this->fieldspec['table_id_jnr']['noedit']);

    return $fieldarray;

} // _cm_changeConfig
```
