I am using the following function to change the column count at run time:

```
function _cm_pre_output($filename)
{
 array_pop($this->report_structure['multi1']['fields'][0]);
    return $filename;
} // _cm_pre_output
```

One can then have a single report structure file with N number of columns defined in it and call the function:

array_pop($this->report_structure['multi1']['fields'][0]);

Y times such that N-Y = K.
