I'm glad you got it fixed.

When you export from the Data Dictionary it will *always* replace the table.dict.inc file with the updated structure details, but it will only create the table.class.inc file if it does not already exist. This means that if you have modified this class file then those modifications will not be lost.

Please remember that you should *never* have to modify any of the files in the includes directory, or any of the standard files supplied in the Radicore download. You can amend the table.class.inc file, the screen structure file or the report structure file as these are the files which are specific to your application.
