I have a suspicion that your 'Add Address' task is trying to run a version of the ADD2 pattern in batch, which is totally wrong. That is why I provided you with a different script for the 'Add Person' task.

It appears that you are trying to run a complete workflow as a set of batch programs which is *NOT* what it was designed to do. If you wish to load person details from a CSV file then you can accomplish this in a single script. If all the input cannot fit into a single CSV file then you can process data from multiple files one after the other in the same script.
