That is odd. I noticed it will work only when 'import column' is used for a table for the first time. If you try re-'import column' again for any table, it will generate this error.

Please take a look at this http://
www.postgresql.org/message-id/20140204081310.GC10459@defunct .ch where it is stated that in PostgreSQL Quote:When you
explicitly set the columns to NULL the default values don't apply. You
have to leave them out or to explicitly request the default valuesandQuote:Specifying NULL explicitly means that is what you want and if the
column is constrained to be non-NULL the system will be unable to fulfill
your request and throw an error.
