Sorry for replying once more but I checked the scripts if there are blank lines before or after the php-tag but there aren't.
I also checked if I can open the list views of the framework. I can open them.
I deleted an recreated the output-tasks. The same result.
I created all the possible output-tasks (1 to 5). Everything works fine but the list view and the label view.
I also checked the table schema with relations etc. with no success.
I removed the column 'rdcaccount_id' and the relation to the mnu_account table. The same result.
I traced the code to the function output($name, $dest) in the file tcpdf_php5.php where the error is probably(?) generated. But I am not familiar enough to see what is going wrong.
What else could be wrong? Do I have to take care of certain table restrictions or something like that? I attached the file kontakte.dict.inc.
