You did not supply the export files with the expected names nor in the expected directories.
Please do the following:
1) Go to Menu -> Subsystem, select 'HTM' and press the 'Export' button. This will create the file 'htm.menu_export.sql' in the 'sql' directory.
2) Go to Dictionary -> Database, select 'HTM' and press the 'Export' button. This will create the file 'htm.dict_export.sql' in the 'sql' directory.

I do *NOT* want a dump of your entire menu and dictionary databases, just those export files for the single subsystem.

Your database schema is supposed to be contained in the 'htm/sql/mysql/ directory, not the 'htm' directory.
