I seem to be having a similar problem, but with the MySQLi interface, not postgre. Initially I had the same error, but on line 47 of the 'dml.mysqli.class.inc' file.

I downloaded the second set of include files and now get 'Catchable fatal error: Object of class mysql could not be converted to string in D:\WWW\Working\!Test\radicore\includes\error.inc on line 223' instead.

I'm using Apache 2.2, PHP 5.2.0 on a Win2K3 Server.
