Hi Tony,

I read the post of deleting files in a filepicker screen with a button in the HOW TO category from 2010. There you told that a new task called 'file(delete)' was added in version 1.42.0. I can't find this task. What expression/pattern do I have to look for?

If there is no possibility to delete files I think there isn't also a possibility to filter images/logos due to the account in a virtual private database, isn't it? If a user cannot delete a file it is possibly the best practice in a VPD to deal with all the logo files. Is this the reason why the framework has no such pattern? Or do you have other reasons/experiences?

Best regards,

Juergen
