Probably obvious of a more experienced troubleshooter, but for the benefit of others, here is the test.php file that I used to check my connection issue:

```
<?php

    // server 1
    $servers[1]['dbhost']            = 'my.fqdn.com';
    $servers[1]['dbengine']          = 'sqlsrv';
    $servers[1]['dbusername']        = 'myusername';
    $servers[1]['dbuserpass']        = 'mypassword';
    $servers[1]['dbport']            = '';
    $servers[1]['dbsocket']          = '';
    $servers[1]['dbprefix']          = '';
    $servers[1]['dbnames']           = 'MYDBNAME,*';
    $servers[1]['serverName']        = 'my.fqdn.com';
    $servers[1]['SQLSRV_schema']     = 'dbo';
    $servers[1]['connectionInfo']    = array(
                                'Database' => 'MYDBNAME',
                                'UID' => 'myusername',
                                'PWD' => 'mypassword',
                                'CharacterSet' => 'UTF-8',
                                    'ReturnDatesAsStrings' => true);

$dbconn = sqlsrv_connect($servers[1]['serverName'], $servers[1]['connectionInfo']) or
    die( print_r( sqlsrv_errors(), true));

?
```
