rafs wrote on Sat, 11 July 2015 00:53After importing all of my user records directly into mysql mnu_user table, I am unable to login with one of the new users. I have set the user to have "GLOBAL ACCESS" and set is_disabled to N. The user_password is Nz-3jN6+lK@Ii^DE. When I try to logon I get 'Security violation.'

This is because the encryption algorithm uses a slightly different key for each user, so you cannot use the same encrypted value for different users.
