What you have there is a circular relationship, but having a foreign key linking to a primary key with a different name is something that occurs more than once in the MENU database. For example:

parent (MNU_TASK)
---
task_id VARCHAR(80)

child (MNU_MENU)
---
menu_id VARCHAR(80) REFERENCES parent(task_id)
task_id_jnr VARCHAR(80) REFERENCES parent(task_id)

A relationship is a relationship, even if it is circular, so you handle it as any other relationship.
