Unless I am mistaken, I think there is a logical error in dml.pgsql.class.inc.
In function: insertRecord

[Line: 973]
// find out if any field in the primary key has 'serial' (auto_increment) set

[Line:1004]
// build 'where' string using values for primary key

[Line:1034]
// validate any optional unique/candidate keys

The framework is not expecting an auto_increment candidate key, I think. Trying to modify the function...
