Part of the installation instructions say that you have to amend the "include_path" directive that is contained withn the htaccess.txt file. You MUST specify the paths to the following directories:

/RADICORE/includes (you may move this to a point outside the web root)
/RADICORE/menu
/RADICORE/audit
/RADICORE/workflow

If you do not specify the correct path names then certain include/require commands will fail.

I hope this is clear.
