Thank you, I got it and it works. If I understand right you insert all files in the specified directory in a 'virtual' table called mnu_file. The selected files will be deleted after pressing the Delete button.

Is it possible to combine all the tasks in one screen?

The tasks would be:

1. choose an image file for the specified table from the listed files
2. delete the image file
3. show the image file bigger when pressing the hyperlink
