Subject: PopUp - Link1 table

Hi Tony,

I have two tables (training_exercises, key exercise_id, rdcaccount_id and training_categories, key category_id, rdcaccount_id) which I linked (table training_category_exercises, key cat_training_category_id, cat_rdcaccount_id, ex_training_exercise_id, ex_rdcaccount_id) with a link1 pattern to define which exercise is related to which category because an exercise can be related to more than one category.

Now I want to choose an exercise which is possible with a popup1 pattern for table training_exercises. But I want to choose the category first, see the linked exercises and choose one of these linked exercises.

Is this possible and if yes, how and which pattern should I use?
