1. Yes I have defined it in the table properties. If I remove the default order seq in the table properties, the changed code will not be executed. Only the framework code is executed.

2. I am logged in with rdcaccount_id No 4. The 'normal' PopUp2 form shows all entries coming from the choosen category. It shows entries from rdcaccount No 4 and 2, although I have created two relationships for the two rdc_account_id fields in the primary key of the link table (key: cat_id, cat_rdcaccount_id, exercise_id, ex_rdcaccount_id).
