In my prototype XAMPLE application, which is available in the online demo, I go to PROTO->Example->Person, select an entry and press the 'Output to PDF (D)' button and this runs through the code which you say is at fault. Line 279 contains the call to $dbobject->formatData(fieldarray). Before the call the value of START_DATE is in the format 'ccyy-mm-dd' and afterwards it is 'dd Mmm ccyy'. It appears in the PDF output as 'dd Mmm ccyy' so I can see nothing wrong.
