You are right. There is no fault. If I output %%date_field in report.inc, everything is fine.

I get this problem, if I calculate an additional $fieldarray entry in _cm_post_fetchRow($fieldarray) in my class file with the following code:

$fieldarray['datum_output'] = 'Trainingsplan: ' . $fieldarray['training_datum'];

In this case the report shows: Trainingsplan: 2016-07-09

How can I get the formatted date at this point? Or do I have the possibility to calculate the $fieldarray entry at a later stage?
