I understand. It is logical! If you see the result you see the logic behind it! But I am lack of experience in these things.
The same for the next question: Is there a possibility to ignore a 'label' field in a 'multiN' row if the following 'field' field is empty?

I tried to use the following code in the report.inc file:

```
$test = '';
if (!empty($test)){
$structure['multi1']['fields'][3][] = array('label' => 'Ablauf:',
  'width' => 17);
}
$structure['multi1']['fields'][3][] = array('field' => 'training_plan_detail_uebung_ablauf',
  'width' => 180,
  'x' => 15,
  'ignore_if_empty' => 'y');
```

But how can I get the value of the field 'training_plan_detail_uebung_ablauf'?
