You wrote: "Is there a possiblity in one of the next Radicore versions to insert a control for slow-motion (i.e. x %) and/or for jumping back x seconds? This would be great for me."

This is not possible with standard HTML markup. The "<video>" tag has the "controls" option which will show only the standard controls (play, pause, etc). According to what I have read at http://www.html5rocks.com/en/tutorials/video/basics/ it is possible to add other controls using javascript and css, but that you will have to do manually.
