Sorry for asking once again but I do understand what you mean but I don't understand how to do it.

At present I have the following code in my pdf output class in _cm_output_multi():

```
function _cm_output_multi ($name, $fieldarray)
  $outarray = array();
  switch ($name) {

 case 'multi1':

  // get contents of foreign table TRAINING_PLAN_DETAIL
$dbobject =& RDCsingleton::getInstance('training_plan_detail'); // Instanz fÃ¼r Detail-Tabelle
$where = " training_plan_detail.verbaende_art_id='{$fieldarray['verbaen de_art_id']
          ......}'";

 $data = $dbobject->getData ($where);

 if (!empty($data)){
  $gr = sizeof($data);

  for ($i=0; $i<$gr; $i++)
  {
$row['training_plan_detail_seq']       =  'No: ' . $data[$i]['training_plan_detail_seq'];
if (!empty($data[$i]['training_plan_detail_uebung_name'])){
 $row['training_plan_detail_uebung_name']   = $data[$i]['training_plan_detail_uebung_name'];
 $row['training_plan_detail_uebung_name_label']   = 'Name:';
```

In $data there are all items of the selected table. I know that all relevant data are written to the $ouput array.
In my report.inc I have the multi1 defined with the known fields. I do not know how I can select the 'non-empty' fields and write them in the multiN output array.

Do I have to define a variable to construct the multiN like: $multi = 'multi' . $i?

If this is too difficult, please don't waste your time. I will then create the report as before.

And can I output an image in the multi area? I have only read about outputting barcode in multiN and outputting images in body area.
