If you have to output multiple lines in the same 'multi1' zone then you should read the documentation which says that each line should have its own line number. You can do this with code similar to the following:

$structure['multi1']['fields'][1][] = ... data for first line
$structure['multi1']['fields'][2][] = ... data for second line
$structure['multi1']['fields'][3][] = ... data for third line

Note the use of "['fields'][N][]" instead of "['fields'][][]".

I have tried this in my development environment, and it successfully drops a line where all fields are empty.
