To display a video file the screen structure file must have the following:

$structure['main']['fields'][] = array('video' => 'Video',

The following is only valid for still images:

$structure['main']['fields'][] = array('image' => 'Image',

I have tried the code you gave me and I cannot reproduce the error. When I set the type to 'video' as shown above I can see the video file.

Can you send me the XML document that was included in the error log?
