Subject: Importing a Database from Oracle

Hi,

I'm new to the Radicore framework, so please forgive me if my problem is obvious.

I've just install Radicore on Windows XP to work against the Oracle 10g XE and Zend Core stack with version 1.20.

This is my first attempt to import a database into the framework.

All works fine until I press the import database button. After a short time the system comes back with a message in the List Databases screen telling me that there are no new schemas to import.

Do I need to be logged in as the schema owner for the schema concerned or do I need to grant the appropriate access permissions to the tables?

Any help appreciated
