Subject: Task, Role - Field Access functionality not working

Tried to List, Add fields by clicking those buttons under Task(Proc) and Role. At first, it seemed like this functionality is not working.

Issue # 1
I checked on READONLY role in List Role, would be good to have a search functionality fo a specific Task. Reason being users will need to navigate the page arrow buttons. Imagine if there were 671 objects. At first I thought it was a bug... Its just the user friendliness.

Issue # 2
Would be good to have a search functionality in "Maintain Field Access via Task" for seaching ROles. Not unusual to have a lot of roles.

Issue # 3
Here is a bug:
1. I did a search for %Role%
2. Checked on mnu_role(list)
3. Click on List Fields
4. It says Nothing retrieved from database table MNU_TASK

Then I removed my search parameter from Search form and navigate to that Task using the page navigator. That works.
