Was trying to call `mysql_query`, `mysql_fetch_array` in `_cm_post_updateRecord`

Can this be done? Seems like calling those does not give me any results or error messages.

I went back to `mysql` functions because `radicore` does not give me the correct results. Attached is a script to implement Van Tulder's Tree <http://www.sitepoint.com/print/hierarchical-data-database>.

One version is using `radicore` and the other using his script.

Test data:

role_id	role_id_snr	lft	rgt
GLOBAL	NULL	1	10
TESTING	GLOBAL	2	9
TESTING2	TESTING	3	8
TESTING3	TESTING2	4	7
TESTING4	TESTING3	5	6

Test Scenerio (Reparent TESTING2 to GLOBAL)

role_id	role_id_snr	lft	rgt
GLOBAL	NULL	1	10
TESTING	GLOBAL	2	3
TESTING2	TESTING	4	9
TESTING3	TESTING2	5	8
TESTING4	TESTING3	6	7
