Subject: different results in queries

Was trying to call mysql_query, mysql_fetch_array in _cm_post_updateRecord

Can this be done? Seems like calling those does not give me any results or error messages.

I went back to mysql functions because radicore does not give me the correct results. Attached is a script to implement Van Tulder's Tree http://www.sitepoint.com/print/hierarchical-data-database.

One version is using radicore and the other using his script.

Test data:

role_id role_id_snr lft rgt
GLOBAL NULL 1 10
TESTING GLOBAL 2 9
TESTING2 TESTING 3 8
TESTING3 TESTING2 4 7
TESTING4 TESTING3 5 6

Test Scenerio (Reparent TESTING2 to GLOBAL)

role_id role_id_snr lft rgt
GLOBAL NULL 1 10
TESTING GLOBAL 2 3
TESTING2 TESTING 4 9
TESTING3 TESTING2 5 8
TESTING4 TESTING3 6 7
